## BOX PLOTS

Another way to display a distribution of one-variable numerical data is with a box plot. A box plot is the only display of data that clearly shows the median, quartiles, range, and outliers of a data set.

## Example 5

Display this data in a box plot:
$51,55,55,62,65,72,76,78,79,82,83,85$, 91 , and 93.

- Since this data is already in order from least to greatest, the range is $93-51=42$. Thus you start with a number line with equal intervals from 50 to 100 .
- The median of the set of data is 77 . A vertical segment is drawn at this value above the number line.
- The median of the lower half of the data (the lower quartile) is 62 . A vertical segment is drawn at this value above the number line.
- The median of the upper half of the data (the upper quartile) is 83 . A vertical segment is drawn at this value above the number line.
- A box is drawn between the upper and lower quartiles.
- Place a vertical segment at the minimum value (51) and at the maximum value (93). Use a line segment to connect the minimum to the box and the maximum to the box.

## Example 6

Display this data in a box plot:
$62,65,93,51,12,79,85,55,72,78,83,91$, and 76.

- Place the data in order from least to greatest: 12, $51,55,62,65,72,76,78,79$, $83,85,91,93$. The range is $93-12=81$. Thus you want a number line with equal intervals from 10 to 100 .
- Find the median of the set of data: 76 . Draw the line segment.
- Find the lower quartile: $55+62=117$; $117 \div 2=58.5$. Draw the line segment.
- Find the upper quartile: $83+85=168$; $168 \div 2=84$. Draw the line segment.
- Draw the box connecting the upper and lower quartiles. Place a line segment at the minimum value (12) and a line segment at the maximum value (93). Connect the minimum and maximum values to the box.

Just make the box plot for each of the following problems.

## Problems

Create a stem-and-leaf plot and a box plot for each set of data in problems 5 through 8 .
11. $45,47,52,85,46,32,83,80$, and 75 . 12. $75,62,56,80,72,55,54$, and 80 .
13. $49,54,52,58,61,72,73,78,73,82,83$, $73,61,67$, and 68 .
14. $65,35,48,29,57,87,94,68,86,73,58$, $74,85,91,88$, and 97 .
15. Given a set of data: $265,263,269,259,267,264,253,275,264,260,273,257$, and 291.
a. Make a stem-and-leaf plot of this data.
b. Find the mean and median of this data.
c. Find the range of this data.
d. Make a box plot for this data.
16. Given a set of data: $48,42,37,29,49,46,38,28,45,45,35,46.25,34,46,46.5,43,46.5$, $48,41.25,29$, and 47.75 .
a. Make a stem-and-leaf plot of this data.
b. Find the mean and median of this data.
c. Find the range of the data.
d. Make a box plot for this data.
